

README :- Zombie Enemy AI (2D Platformer)

This document explains everything required to run, test and understand the **Zombie AI System** created for the project. It also includes file names involved, setup steps, behaviour explanation and gameplay controls.

Files Used in Enemy (Zombie) AI

File Name	Purpose
ZombieAI.cs	Handles enemy movement, chasing and damage logic
ZombieHealth.cs	Manages HP, damage intake and death behaviour
ZombieSpawner.cs	Spawns zombies in specific waves and areas
PlayerHealth.cs	Needed because zombies must damage player
PlayerAttack.cs	Allows player to kill zombies using attack input
HealthPickup.prefab	Dropped by zombie on death as recovery reward
Zombie.prefab	Prefab containing the zombie + scripts attached

How to Run the Zombie AI in Unity

Follow these steps inside Unity:

1. **Import Player, Zombie & Scripts** into Assets

2. Create a **Zombie Prefab** containing:
 - a. Sprite Renderer
 - b. Rigidbody2D
 - c. Capsule/Box Collider2D
 - d. ZombieAI.cs
 - e. ZombieHealth.cs
3. Create a **HealthPickup Prefab** and assign to ZombieHealth → healthPickupPrefab
4. Create empty GameObjects for **spawn points**
5. Add ZombieSpawner.cs to each zone where zombies should appear
6. Assign:
 - a. Zombie Prefab → spawner inspector
 - b. Spawn Points[]
7. Press Play → zombie will chase player automatically.
